

# SUCTION GATTO

Gerotto Suction Gatto is the latest variant of the Gatto RC mini excavator: it is equipped with a suction hose held by the mechanical arm. This mini excavator is remote controlled and can reach dangerous areas, thus avoiding the presence of workers and preserving their health.

Suction Gatto is the ideal machine for working with hydro excavators and vacuum trucks. Thanks to the mechanical arm it's easy to move the hose to the desired position: in particular, since it is placed vertically, it can reach a greater depth.

Suction Gatto can be used to perform line, sign and pole installation, potholing, daylighting or to rehabilitate sewers and pipes.

Don't let men do dangerous works.

Guarantee their safety by using the RC mini digger Suction Gatto.

**NO MORE RISK**
